WARMTH

# FUTURE WARMTH

## FUTURE WARMTH - A BETTER ANSWER TO SUSTAINABILITY.

As being a part of global citizen's responsibility, Little King Global Co., Ltd. senses a strong need for offering people more and more sustainable material practices in the apparel industry.

After year's research in yarn and machinery, we discover a new way to rethink and focus more on thermal materials other than traditional fleece.

## FUNCTION AND SUSTAINABILITY – YOU CAN HAVE IT ALL.

Future Warmth removes the brushing and reduces fiber shedding that minimizes the environmental impact during home laundering.

Without compromising the performance, FUTURE WARMTH series not only fully achieve thermal standard just as good as traditional fleece but also enhance the breathability.

Little King Global Co., Ltd. also corporates with Outdoor Microfibre Consortium (OMC) for joint research on microfiber pollution.

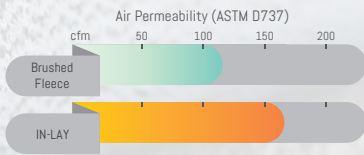

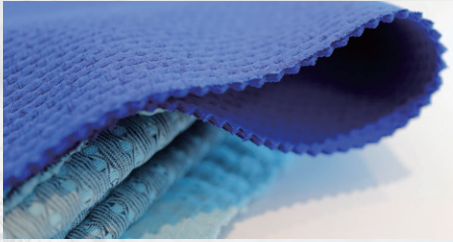

We aim to develop a better understanding of microfiber shedding that can further influence consumer's decision when it comes to sustainable purchasing.

Together with Little King, let's make fabric fabulous.

## IN-LAY

The thermal solution to winter and fiber-shedding.

The dimensional fabrication creates air pockets to store the heat by filling piles into the knitted construction.

## ADAPTABLE INSULATION

Designed for both sports and casual activities, the texture of this insulation allows moisture to move freely through the fabric that draws excellent regulation of body temperature.

## SPACER

Our unique spacer knitting construction easily keeps the fabric in shape without folding mark and provides natural stretch function without adding spandex.

## DESIRED TERRY

With innovative technology, whatever creative ideas pop up in your mind can be turned into a beautiful textile.
